

AUGMENTATION SYSTEM FOR DOCUMENTATION

ABSTRACT

According to the present invention, there is provided a documentation
5 system including an augmenting mechanism that elicits more accurate
conclusions through the analysis of entered information and predetermined
criteria. The present invention also provides for a method of documentation
based upon the augmenting mechanism and a method of augmenting to
calculate more accurate conclusions based upon all entered information and
10 related predetermined criteria. Additionally, the present invention includes a
software program for operating the documentation system and method for the
operation of the augmenting mechanism. The present invention provides for a
computerized documentation entry system for determining more accurate
conclusions including a software program having an augmenting mechanism and
15 a graphic user interface for displaying, accessing and interacting with users of
the documentation system. Preferably, the present invention is directed towards
a system, software program, and method for accurately and completely
determining payment reimbursement in the health care field.
